ONEHUB SELECTS SIBER SYSTEMS' GOODSYNC
TO ALLOW FILE SYNCHRONIZATION TO THE CLOUD
Onehub Sync, a New Feature of Onehub Workspaces, Leverages Reliability and Convenience
Of Siber Systems' Popular Backup and Synchronization Technology

FAIRFAX, VA — (Oct 14, 2010) — Siber Systems, Inc., a company dedicated to providing world-class computing productivity software for enterprises and individuals, announced today that its GoodSync data backup and synchronization product has been licensed for integration within Workspaces, a key product of online collaboration software company Onehub Inc. Onehub Sync, the GoodSync-powered component, enables Workspaces users to easily synchronize the files and information stored on their computers with their Onehub Workspaces in the cloud, without having to open an Internet browser.

Onehub Sync, released in beta to Onehub Workspaces users in August, makes it easy to share files and collaborate with business associates both inside and outside a corporate firewall. After downloading and installing Onehub Sync, users simply drag and drop files from their desktop into the Onehub folder. Files are automatically synced to client extranets, partner portals, or internal department intranets, ensuring that all parties are working with the most current documents.

"While we evaluated many file synchronization technologies on the market, we chose GoodSync to help us build Onehub Sync because it is the most reliable technology and simply worked better than the others," said Charles Mount, Chief Executive Officer of Onehub, Inc. "We want to make sure that we continue to provide great collaboration solutions to our customers—and Onehub Sync was no exception."

Onehub Workspaces is a full-featured collaboration platform for small and medium-sized businesses. It provides tools to create secure and customized workspaces for online collaboration and document sharing. Over 80,000 business users rely on Onehub services everyday to make them more productive and efficient.

"Onehub strongly emphasizes ease-of-use, simplicity, strong feature sets and reliability in its products. It's a great compliment for GoodSync to be chosen to enhance Onehub Workspaces," said Bill Carey, Siber Systems VP of Marketing. "We're confident that Onehub Workspaces users will discover real value and productivity in the GoodSync-powered Onehub Sync."

GoodSync, winner of top awards from PC World, Network World and others, allows users to synchronize data between any two PCs or storage devices, in any direction. The product

automatically detects the latest file changes and deletions regardless of where the changes or deletions exist, then move them to all other devices involved in the sync. GoodSync supports several ways to protect, encrypt and transfer files including Windows Local Disk, Windows Network Server, FTP, SFTP, WebDAV and Amazon S3.

To create Onehub Sync, which is compatible with both Mac and Windows computers, Onehub licensed Siber Systems G Sync Command line tool. For a full list of GoodSync features, to purchase GoodSync, or for further information, visit www.goodsync.com.

About Onehub:
Onehub provides online collaboration software that empowers businesses with the most flexible and full-featured collaboration platform and simple, secure file sharing solution. Onehub is the easiest way to collaborate online, share files and manage projects. Onehub solutions are used by companies all over the world to make them more productive and efficient. Onehub is a privately held company founded in 2007 and is headquartered in Bellevue, WA.

About Siber Systems:
Founded in 1995, Siber Systems creates and markets software products to consumers and businesses around the world. Our software is highly acclaimed and has received numerous awards including PC Magazine Editor's Choice, CNET's Best Software of the Year, and PC World's 25 Products We Can't Live Without. The company's flagship products, RoboForm and GoodSync, are used by millions of people worldwide, with registered customers in over 100 countries. GoodSync, an easy and reliable automatic file synchronization program, was released in 2006 and already enjoys favorable reviews from users and the press. RoboForm Enterprise has been solving password management problems quickly, easily and cost-effectively since 1999. RoboForm Enterprise reduces employee passwords to one secure, master password and provides an easy and cost-effective way to improve password security while making employees more productive and helping organizations to recognize immediate IT cost savings. As part of the company's strong commitment to customer satisfaction, its software comes with a risk-free trial. Headquartered in Fairfax, Virginia, Siber Systems is privately held.
